A B S T R A C T

The method of indexing multimedia documents comprises the following steps: a) for each document identifying and
5   extracting terms t_i constituted by vectors characterizing properties of the; b) storing terms t_i in a term base comprising P terms; c) determining a maximum number N of desired concepts that group together the most pertinent terms t_i; d) calculating the matrix T of distances between the terms
10   t_i of the term base; e) decomposing the set P of terms t_i of the term base into N portions P_j ($1 \leq j \leq N$) such that $P = P_1 \cup P_2 \ldots \cup P_j \ldots \cup P_N$, each portion P_j comprising a set of terms t_{ij} and being represented by a concept c_j, the terms t_i being distributed in such a manner that the terms that are farther apart
15   are to be found in distinct portions P_1, P_m, and the terms that are closer together are to be found in the same portion P_1; f) structuring the concept dictionary; and g) constructing a fingerprint base made up of the set of concepts c_i representing the terms t_i of the documents, each document
20   being associated with a fingerprint that is specific thereto.
